Experiment 3

- AIM:Develop Expense Tracking Module with Exception Handling

Code:

```
using System;
using System.Collections;
using System.Collections.Generic;
using System.ComponentModel;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace lab3
{
   internal class Program
   {
      static void Main(string[] args)
      {
         int ch;
         List<expense> expenses = new List<expense>(); do
         {
            Console.WriteLine("'^^^^^^^^^^^^^^^'");
            Console.WriteLine("'Expense Tracker Module'");
            Console.WriteLine("'1. Add Expense'");
            Console.WriteLine("'2. View All Expense'");
            Console.WriteLine("3. View Total Expense Amount");
            Console.WriteLine("4. Exit");

            try
            {
               Console.Write("Enter your choice=");
               ch = Convert.ToInt32(Console.ReadLine());

               switch (ch)
               {
                  case 1:
                     {
                        try
                        {
                                                expense exp = new expense();
                           exp.accdet();
                                    Console.WriteLine("Expense added Successfully");
```

```
        }
        catch (FormatException)
        {
            Console.WriteLine("Error : Please enter a valid numericvalue");}
        catch (Exception ex)
        {
                        Console.WriteLine("Error :" + ex.Message);
        }
        finally
        {
            Console.WriteLine("Expense processing completed"); }
        break;
    }
case 2:
    {
        if (expenses.Count == 0)
                        Console.WriteLine("No Expense");
        else
        {
                            foreach (expense expense in expenses)
            {
                expense.dispDet();
            }
        }
        break;
    }
case 3:
    {
        double t = 0;
                        foreach (expense expense in expenses)
        {
            t = t + expense.amt;
        }
        Console.WriteLine("Total Expense=" + t); break;
    }
case 4:
    {
        Console.WriteLine("Thank you for using expense tracker"); break;
    }
default:
```

```
                {
                                    Console.WriteLine("please select valid menu");
                    break;
                }

            }
        }

        catch (FormatException)
        {
            Console.WriteLine(" Please select any one from above"); ch = 0;
        }
    } while (true);
    }
}
class expense
{
    public int expid;
    public string category;
    public double amt;
    public string paymentMode;
    public DateTime expDate;
    public void accdet()
    {
        Console.WriteLine("Enter expense id=");
        expid = Convert.ToInt32(Console.ReadLine());
        Console.WriteLine("Enter expense category=");
        category = Console.ReadLine();
        Console.WriteLine("Enter expense amount=");
        amt = Convert.ToDouble(Console.ReadLine());

        if (amt <= 0)
        {
            throw new Exception("Expense amount must be more than Zero"); }
        Console.Write("Enter payment mode (cash/UPI/card)");
        paymentMode = Console.ReadLine();
        expDate = DateTime.Now;
    }

    public void dispDet()
    {
```

```
            Console.WriteLine("'^^^^^^^^^^^^^^^^^^^^'");
            Console.WriteLine("'Expense Id=' +expId");
            Console.WriteLine("category=" + category);
            Console.WriteLine("Amount ="+amt);
            Console.WriteLine("PaymentMode=" + paymentMode);
        Console.WriteLine("'^^^^^^^^^^^^^^^^^^^^^^^^'"); }
    }
}
```
